EDUCATION

General Assembly, Chicago, IL — *Fullstack Web Development*

September 2017 - December 2017

- Built dynamic web applications using modern Javascript libraries and CSS to layout and style applications.
- Collaborated with a team to produce high quality software to develop, maintain, change and secure an application.

University of Colorado-Denver, Denver, CO — *Computer Science*

August 2013 - December 2016

- 78 Credit Hours Completed

PROJECTS

Roulette.js

- Developed using Javascript, JQuery, CSS3 and HTML5.
- Responsible for creating an application and to produce deployable MVP by deadline
- Researched and investigated functions and methods that contributed to establish functionality and a more intuitive experience for users.

TV and Movie CRUD App

- Developed using Express.js, Node.js, MongoDB, and Javascript.
- Collaborated with a team to build a CRUD application to allow users to create and read reviews on television shows and movies.
- Directed the pace of completion and delegated responsibilities to team.
- Led API integration and created functions to average out ratings.

Myer-Briggs Personality Type App

- Built using React.js and Materialize for front-end development.
- Mapped and strategized how to organize components to streamline the ability to pass down props.
- Designed and integrated Materialize to create an application that allows users to discover more about their personality type.

Basic Progress

- Created using React.js, Ruby on Rails, Jest and PostgreSQL.
- Utilized Ruby on Rails and PostgreSQL for back end-development.
- Diagnosed and troubleshot problems while making use of test driven development.
- Planned the layout and outlined the components to create a cohesive application.
